Professional Summary

AI/ML Engineer and Full-Stack Developer with mid-level experience delivering intelligent systems. Led development of a real-time detection platform using YOLOv8 on AWS SageMaker, achieving 98% accuracy and cutting processing time by 40%, and built a sentiment-analysis tool with BERT that boosted user satisfaction by 20%. Research background in Mobile Ad Hoc Networks strengthens analytical and problem-solving abilities. Seeking to apply AI and full-stack expertise to drive innovative products and improve user outcomes.

Technical Skills

- **Programming:** Python, C, C++, JavaScript, Ruby
- **Web Development:** Ruby on Rails, Flask, Streamlit, MVC Architecture
- **Databases:** SQL, NoSQL, MongoDB, Hadoop, Hive, BigQuery, Active Record
- **Machine Learning / AI:** Deep Learning, Neural Networks, YOLOv7/YOLOv8, ILPD-NET, NLP, CV
- **Cloud / DevOps:** AWS (S3, SageMaker), GCP (BigQuery), Docker, Git
- **Cybersecurity:** Network Security, Information Security, NIST, ISO 27001
- **Tools:** TensorFlow, PyTorch, Tableau, Matplotlib, Seaborn
- **Data Visualization:** Tableau, Power BI

Experience

University of North Texas | *Student Assistant*

Feb 2025 - Feb 2026

- Supported faculty and students with academic documentation, form coordination, and workflow operations by creating Python scripts that automated form validation and applied NLP techniques to summarize feedback, which sped up document processing and reduced errors
- Assisted departmental administrative activities such as scheduling, communication, and resource management by using Outlook and Slack for coordination and a shared Google Sheet to track resources, which improved meeting scheduling efficiency and kept resource allocation transparent

Prasthana Software Solutions | *AI/ML & Full-Stack Developer(Intern)*

Dec 2023 - May 2024

- Developed and launched full-stack features for the Tenmates platform using Python, improving user onboarding speed and navigation experience, which increased customer satisfaction and reduced support requests.
- Implemented YOLOv8 and ResNet models in Python on AWS SageMaker for real-time image-based automation, achieving 98% detection accuracy and reducing image processing time by 40%.
- Built end-to-end Python pipelines using pandas and scikit-learn on AWS S3 to preprocess raw images and generate labeled datasets, cutting manual preparation time and supporting faster model training
- Integrated pretrained BERT-based NLP models with Streamlit to perform sentiment analysis and text classification on user feedback, enabling the team to identify key trends and implement product improvements that increased user satisfaction by 20%.
- Collaborated in two-week Agile sprints by conducting code reviews and leading technical discussions, which improved code quality and helped the team deliver new features 20% faster.

Amrita Vishwa Vidyapeetham | *Mobile Ad Hoc QoS Researcher*

Apr 2023 - Jun 2023

- Evaluated QoS performance in MANET environments using NS-3 routing simulations in Docker and PyTorch models to analyze latency and throughput, identifying critical bottlenecks and enabling a 20% improvement in network optimization strategies.
- Analyzed routing behavior, mobility effects, packet flow, and network stability, identifying key factors that improved network performance and reduced packet loss.
- Conducted literature reviews of over 30 recent studies and integrated best practices into QoS testing methodologies, resulting in faster test setup and more reliable results.
- Documented experiment results and research insights in detailed LaTeX reports, enabling peer review and informing the department's future MANET research direction

Software Engineering Researcher

Oct 2022 - Apr 2023

- Built automation tools to streamline recruitment workflows and reduce manual tasks.
- Participated in research planning by designing experiment protocols, developed prototype software in Flask and PyTorch, and authored technical documentation, enabling the team to meet project deadlines
- Supported execution of project milestones by coordinating tasks in Git and producing weekly status reports, ensuring timely delivery of each milestone

Projects

IntelliFace - AI Attendance System (YOLOv8, Face Recognition)

- Developed a face-recognition attendance system using YOLOv8 and ResNet encodings.
- Implemented real-time webcam detection, automated attendance logging, and user verification.
- Built Streamlit and Flask-based interfaces for dashboards and control.

Smart Curb Parking System (YOLOv7, ILPD-NET)

- Designed an automated parking enforcement solution using YOLOv7 and ILPD-NET.
- Applied image-processing methods including edge detection and Gaussian filtering.
- Integrated camera feeds and preprocessing pipelines for real-time inference.

Education

University of North Texas, Denton <i>Masters, Computer Science (GPA: 3.7)</i> Coursework: Artificial Intelligence, Machine Learning, Big Data, Software Engineering, Advanced Algorithms, Cloud Computing, Software Development for AI, Secure Systems	Aug 2024 - May 2026 <i>Denton, Texas</i>
Amrita School of Engineering, Chennai <i>B.Tech, Computer Science</i> Coursework: Data Structures & Algorithms, Operating Systems, OOP, Compiler Design, Distributed Systems, Computer Networks, Information Security, DBMS, Web Technologies, Artificial Intelligence, Machine Learning, Cloud Computing, Agile Development	Aug 2020 - May 2024 <i>Chennai</i>

Certifications

•Google Cloud Computing Certification •AWS Solutions Architecture Virtual Experience (Forage)	•C++ Course (Udemy) •Accenture Developer Virtual Experience (Forage)
